

## Abstract of the Disclosure

A zoom lens system for directing an optical image on an electric image sensor that includes a first lens unit disposed on a most object side and having a negative optical power, a second lens unit having a positive optical power, and a third lens unit including a most image side lens unit having at least a positive lens element and a negative lens element, wherein the following condition is satisfied:

$$3 < |f_l/f_w|$$

where  $f_l$  is a focal length of the most image side lens unit, and  $f_w$  is a focal length of the zoom lens system in a shortest focal length condition.
